

The heart of any supply chain are the systems you use to ship, track and manage your business. The systems you put in place need flexibility and power to get the job done.

Extend shipping to your business systems.

with ShipExec™ technology

Customer Solutions' Advanced Shipping Technologies team is a group of experienced integrators and developers who deliver implementation services for high-performance, advanced shipping systems.

Our integrated approach is ShipExec™ technology. Based on UPS's patented, multi-carrier shipping technology from ConnectShip, ShipExec technology provides a foundation for connectivity between your systems and carrier-specific functionality. The result is a tailored and integrated shipping solution.

We know that every business is a little different, so when it comes to configuration, our professionals can match your business rules, the carriers you use, and service delivery commitments with one global solution.

Integrated value for SAP® enterprise resource planning (ERP) software

Customer Solutions has the experience and expertise to embed premier shipping capabilities using ShipExec technology. Working with CONTAX Inc, an SAP® Gold Partner, an SAP® Certified Shipping Solution for SAP® ERP Central Component and SAP® Extended Warehouse Management releases can be implemented for your business.

Our experts can help integrate some key capabilities into your business planning software, like: shipment tracking, processing accessorial, and automatically combining shipments going to the same destination. With ShipExec technology, your ERP platform can help you determine the best mode and service options for shipping, and make packing, and weighing part of the same process for your staff.

Working together, ShipExec technology and your ERP can reduce times to final delivery and expensive address correction charges with address verification, and when our experts add the capability to pre-fill customer requirements and automate customs filing, it will help reduce errors and improve your customers experience.

Whether you need shipping performed in a mailroom, distribution center, desktop or integrated in your existing architecture, ShipExec™ technology can work for your needs

Superior functionality made personal

ShipExec™ technology provides all of the features that you demand in your shipping applications:

- From the shipping floor to any desktop in your organization, our solutions provide integrated shipping functionality at any point in the order pipeline
- You have invested resources in your warehouse management, order entry, and customer service systems, and ShipExec technology interfaces your shipping directly into these critical systems
- Manage multiple carriers with carrier-compliant labels and shipment documentation requirements

Reduce the concern if you are in an enterprise resource planning work environment. ShipExec technology partners with CONTAX, an SAP Gold Partner, who has been implementing SAP shipping solutions since 2006. CONTAX and ShipExec technology follow SAP Best Practices and standard SAP functionality is used whenever possible.

How do you get started using ShipExec™ technology?

Your UPS Account Executive can assist you in learning more about this solution and connecting you with UPS's Customer Solutions team. Working together, UPS and you will determine which solutions will work best for your business to help you meet your supply chain goals.

Deployment options

ShipExec technology offers various deployment options based on your needs, such as:

- Premise Based – a traditional model where UPS experts help install the hardware and software that you need within your own facility, and behind your security firewalls
- Web Service – multi-tenant, web service application programming interfaces
- Managed Software as a Service – UPS handles the hardware and software needs by providing dedicated hardware in our secured data center and on-demand software
- Hybrid – uses a combination of any of the other technologies to build a workable solution that fits your needs

Features that support your business

- Multi-Carrier capability that supports more than 100 different carriers
- Multi-Modal that allows the creation and management of shipments, including small parcel and freight
- Multi-Platforms give the interfaces and integrations that you need, where you need them
- Worldwide access means that you can not only ship internationally, but originate your shipments from almost 100 countries worldwide
- Mode and packaging optimization options that give you choices; not only in box sizes, but also in the carrier and services selected
- Precision processing takes the guess work out of how to make shipping decisions. We enable your forward thinking business logic to be embedded in the work-flow at any point during the process
